

T/C™ CONTENDER®, G2® & ENCORE® REPLACEMENT STOCKS, PISTOL GRIPS AND FOREARMS

Woodsmith items are made to order with each customer's fit and finish preference in mind. All Bullberry buttstocks are custom designed in a cast-off style and incorporate an off-set palm swell pistol grip in an attractive style.

Ambidextrous models are available, but right- and left-handed styles are suggested for the most custom fit.

Our standard stocks are made longer and with a higher comb than the industry average and will have most shooters looking right down the scope.

Any length of pull or comb height can be ordered at no additional cost.

Each customer has a choice of a Pachmayr Old English pad or European-style wood buttplate. Decelerators are also available at an additional cost.

All wood blanks are fully cured to minimum moisture content and are offered in a variety of grades.

Almost unlimited choices of wood are available including standards in English, Bastogne, and Black Walnut as well as limited items in Maple, Claro Walnut and Screwbean Mesquite. In addition to the above, Rosewood, Ebony and other limited exotics are available for contrasting grip caps and forearm tips.

Multiple forearm styles – Sporter, Target, Schnabel and wide – are available. All forearms mount on our original hanger without applying any stress to the barrel and are available at your choice of 7 to 12 inches long. Longer forearms are available for an additional charge, making a Mannlicher-style possible on a guaranteed-accurate T/C carbine.

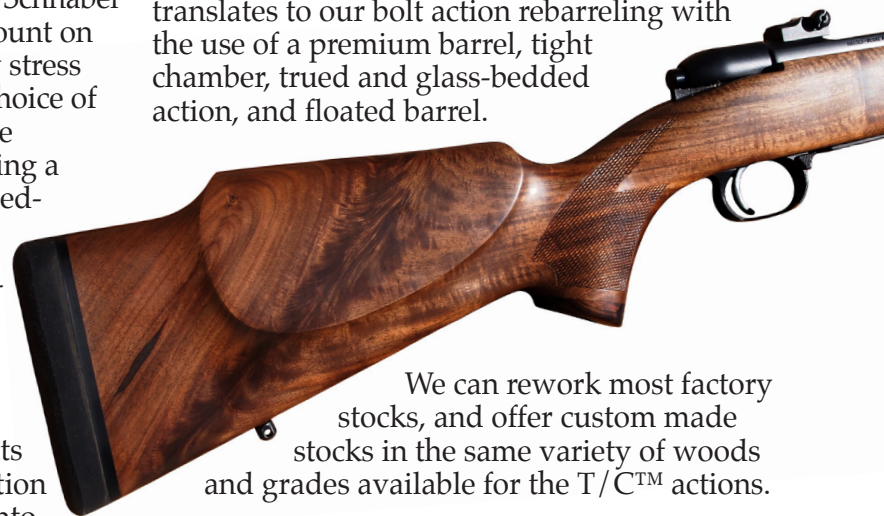

Multiple finishes are also available. Semi-finished products are appropriate for the shooter who wants to have a part in their gun's completion. These items are fully shaped and inletted, with a butt-pad installed on stocks. Fully finished products are available in two finishes. Our production finish is a satin finish that sinks slightly into open grain. Epoxy finish – in high gloss and satin – is available at an additional cost. This durable epoxy finish allows for the best presentation of the grain and color of your custom woodwork.

ADDITIONAL PRODUCTS & SERVICES

In addition to our work on after-market products for the Thompson/Center™ actions, here at Bullberry we will put our expertise in fine gun manufacturing to work by rebarreling most bolt-action pistols and rifles.

The accuracy we have become famous for translates to our bolt action rebarreling with the use of a premium barrel, tight chamber, trued and glass-bedded action, and floated barrel.

We can rework most factory stocks, and offer custom made stocks in the same variety of woods and grades available for the T/C™ actions.

We also offer accessories for your guns including Redding die sets, Bullberry custom form dies, scope bases (including our own steel Weaver-style base), rings, scopes, and iron sights, as well as Bullberry's Encore® rimfire adapter. This allows the centerfire Encore® to accept rimfire cartridges with our same exceptional accuracy.

CUSTOM LASER ENGRAVING & HAND CHECKERING

We offer custom engraving on barrels, frames and select accessories. Our laser engraving shows text and graphics as black on stainless items; removes the bluing to show white-metal on blued items.

- Hand checkering is now offered in-house and is designed to match your specifications and highlight the wood's shape.
- Engraving and checkering are priced on request due to the wide range of options, design/setup time involved, and customization for each client.
